

**Surrey County Council Local Committee (Guildford) 22 June 2016**

**Petition [Item 5a]**

**Flexford Gap Petition** – postponed until 20 September 2016 Local Committee for further investigation by the Surrey County Council Legal team.

<b>Principal petitioner/organisation</b>	Kate Mackay 125 confirmed signatures, e-petition
<b>SCC Division / GBC Ward</b>	Shere/West Clandon
<b>Summary of concerns and requests</b>	<p>We the undersigned request that you stop HGV 's travelling through West Clandon village and mounting the pavement to pass each other. That a restriction of 20mphs is put in place through The Street &amp; Clandon Road and by the Primary School.</p> <p>(please see background information below, following the response)</p>
<b>Response</b>	<p>The committee would like to thank Mrs MacKay for taking an interest in road safety in West Clandon and organising the petition being presented today.</p> <p>The petition focuses on reducing the speed limit through West Clandon village to 20mph, introducing restrictions on the size of HGV's and preventing vehicles mounting the pavements. Numerous similar request for changes to the road network are made each year and the Local Committee has an annual budget for undertaking highway improvement and maintenance works, see agenda item 14, for 2016/17 budget allocations. All requests for significant changes such as those made by the petitioners are considered by the Transportation Task Group each Autumn, who report to the committee and make recommendations on which requests should be prioritised for funding and implementation in the following year. This petition will be considered by the task group later in the year, as well as the following officer comments, alongside requests from previous years and those made this year.</p> <p>The A247 through West Clandon has a 30mph speed limit, however average speeds are known to be well in excess of this at between 35 and 40 miles per hour. Consequently for the past year or more Surrey County Council (SCC) highways officers and police road safety officers have been considering measures</p>

aimed at reducing speeds to nearer the 30mph limit in consultation with West Clandon Parish Council. Surrey Highways will be installing a vehicle activated sign (VAS) this Summer which is funded by the parish council. The sign will display '30 SLOW DOWN' when triggered by speeding vehicles. A second VAS sign is under consideration, as are alterations to the conventional signs and road marking such as removing the centre line. The centre line was removed on the A248 through Albury last year and this measure is known to have a traffic calming effect. .

Given present vehicle speeds introducing a 20mph limit which is effective in reducing speeds to near 20mph would require significant interventions to the road layout to physically regulate speed. Such traffic calming typically takes two forms: vertical features such as road tables and speed cushions as found in Bellfields, or horizontal features such as kerb build - outs with priority give-way as found in Trodds Lane. Both types of physical traffic calming have to be illuminated at night, so are accompanied by enhanced street lighting, and as a result introducing a 20mph limit would be a high value highway scheme. Traffic calming has other secondary impacts in addition to changing the night-time ambience of a road. Road tables can generate noise and ground vibration while build-outs with priority give way are associated with vehicle braking and acceleration. Both types of traffic calming have been considered by the parish council and officers understand their view is that such changes and their secondary effects may be unlikely to be welcomed by the majority of residents, who if they were aware of them would be also less likely to support the introduction of a 20mph speed limit. The parish council would prefer to continue to work with SCC and the police to get speeds down nearer to the current 30mph limit.

Turning to restricting HGV's the A247 is one of the historic rural A roads within Surrey and links settlements to the south of Guildford to the A3 trunk road and Woking. These rural A roads typically form the high street through the centre of villages such as West Clandon, as is the case to the south where the A248 passes through Albury and Chilworth for instance. Restricting HGV movements on these roads is simply not practicable since no alternative suitable roads exist.

Lastly highways officers and police road safety officers are very aware of locations where vehicles mount footways in order to pass oncoming traffic. New bollards will be considered, but in most places the footways are so narrow that a bollard would make it impossible to pass with a push-chair. Widening the carriageway and/or the footways would require land acquisition which is an expensive and lengthy process, likely to involve Compulsory Purchase Order (CPO) procedures which can trigger a Public Inquiry, and as a result SCC reserve land acquisition for major infrastructure projects such as construction of the A331 Blackwater Valley Route.

--	--

*Background to e-petition:*

For many years West Clandon has had problems with HGV's speeding through the village both in the 40mph and 30 mph zone. Whilst this is classed as an A road 247, which provides access to the A3, A25 and A246. In fact it is a B road in a small village that does not have the capacity to take the traffic. There are several bends and areas where the visibility is limited, there are very narrow pavements and pavements only one side of the road. And when they cannot pass another vehicle coming in the opposite direction they mount the pavement to pass each other. I enclose 2 photographs as evidence. This is a frequent occurrence.

Six years ago, My daughter and I together with my 2 grandchildren age 6 weeks and 2 years (who were in a double buggy) were walking from Felix Drive to the Railway Station. An HGV that was coming from Clandon Road/The Street, which was speeding mounted the pavement inches from my 6 week old grand-daughter. The vehicle drove along the pavement, the driver did not even slow down, he/she was going so fast we could not even obtain a number plate or the name of the Company who owned the HGV's. I reported this matter to the police to the Parish Council and to Guildford Borough Council.

Six years on we still have the same problem which results in people not being confident about walking about the village in their daily lives. Reports of vehicles mounting near the bus stop, of cars driving so close to people are put in serious danger.

Introduction:

I was promised that we would have speed checks and in six years they have been very few usually outside of any period when the traffic is heavy. The Parish Council looked at putting in VAZ signs and when we were about to put them in last year 5 years later this was dropped. This is now being reviewed but will not solve the problem of HGV's or speeding vehicles entering the 30mph zone from the 40mph zone or stopping large vehicles from mounting pavements.

Findings:

A speed test survey was carried out a couple of years ago, which showed traffic speeding through the village at 50/60 and up to 70 mps. And still no effective measures were put in place to reduce the risk to pedestrians. There are several areas of risk, The Clandon Road, A 3 Slip Road, the 30mph section at Lime Grove bend, the Railway Station area, the area by Summers and the area from the Clandon Cross Roads by Clandon Park and the Village School.

We are in a situation where families with their children cannot walk safely around this village to the Railway Station, Playground or Village School. There is only one crossing point by the Playground and Village Hall. The lighting in Winter is bad with many accidents being at the Clandon Road section slip road and it is becoming every increasing difficult for people to enter and exit their drives in vehicles safely on Clandon Road and The Street. Lines of sight and visibility are poor due to the bends and the Bridge at the Railway Station.

When it rains flooding of the road is serious with the narrow pavements it is almost impossible for Pedestrians to walk down Clandon Road and The Street without being drenched in drain water from Vehicles. In the last year or so we have many cyclists using the village and it is extremely dangerous for them. Another problem last year or so has been over the weekends with constant traffic and speeding motor bikes seen speeding at 60/70 mph and on the wrong side of the road by Lime Grove bend, where the speed drops to 30mps.

### Conclusion:

In view of the fact that many Counties in the Country including London, have now put in speed restrictions and measures to stop HGV's and speeding vehicles using areas as "rat runs" when the traffic becomes heavy on the motorways they should be using, it is now time that the situation in West Clandon is reviewed. It is not acceptable to continue to allow HGV's and other vehicles to speed through this village and put people at risk by trying to pass vehicles when there is insufficient room. It is not acceptable for this problem to be ignored and putting vehicles travelling through the village before the residents.

This year the village school will be accepting up to age 11 and there needs to be a speed reduction to 20mph as in other areas which complies with the Surrey County Council 2014 Safety Outside School Policy. This would allow those parents who wish to walk their children to and from school to do so.

Therefore as a Health and Safety Consultant I advise SCC/GBC to put in place the measures that would greatly reduce the risk.

1. Lighting and Signage by the Clandon Road hotspot.
2. Reduce the Speed in the 40 mph zone to 30mph.
3. Put VAZ sign by Lime Grove as planned.
4. Reduce the Speed in the 30mph zone to 20 mph.
5. Put measures in at the Bridge so that vehicles can pull out of the Railway Station and Oak Grange Road with safety. A width/weight restriction on the Bridge is an option.
6. Put in measures along the hotspot by Summers to stop vehicles mounting the pavement.
7. A 20 mph zone along by the School with road signage
8. Measures in place by the Church so that residents can cross safely to the Church.
9. A VAZ sign as you come into the village from the Clandon Cross Roads.
10. The air pollution emissions needs to be considered as many of the Properties on Clandon Road and The Street are at risk.

The previous response from Guildford Borough Council over road safety has given priority to vehicles over people who live in the village. I hope now that Surrey County Council, who are responsible for the Highway will not take the appropriate steps to change this and give the same consideration to residents that is given in other Counties as part of the UK initiative to reduce accidents and deaths.

The accidents statistics for the village do not include 1915, 1916, and since there have been a lot of near misses not reported, I am not going to present the accident statistics but I will highlight some of those reported which have happened recently.

Examples: Incidents & Comments from Residents.

1. Felix Drive: Crossing the Road by Felix Drive, half way across with grand-daughter and women comes from the Railway Station in vehicle speeding had to grab my grand-daughter and pull her back. No where in sight when we started to cross the road.
2. Felix Drive: 2 residents have written to GBC/SCC regarding the speed of the traffic and trying to exit the drive safely.
3. From Resident:

I met a very wide load yesterday morning being escorted by a police car over the railway bridge at more than a slow speed . I dread to think what would have happened if another HGV was in the vicinity.

As an aside, I have noticed an increasing number of trainee HGV's going through the village lately and wonder if it is used for training purposes because of the obstacles created by the road conditions.

4. From Resident:

I do not know if you are aware but there was a nasty accident that an ambulance was called to this evening at about 8pm. It was at the Junction where you get on the A3 going Southbound. Also if we reduce the speed through the village, at the point where it is 40 mph and is still a built up area, it also needs to be reduced as proved by the accident this evening.

5 From Resident;

There was another nasty accident with ambulance / police about 8 weeks ago during the day at the same spot (sorry do not have date). At the actual junction as you turn right to enter the slip road down to the A3 south.

Two cars crashed (one certainly write off)...elderly drivers in both.

6 From Resident:

I do not know if you are aware but there was a nasty accident that an ambulance was called to this evening at about 8pm. It was at the Junction where you get on the A3 going Southbound. Also if we reduce the speed through the village, at the point where it is 40 mph and is still a built up area, it also needs to be reduced as proved by the accident this evening.

7 From Resident:

Just seen what I would deem to be a "serious" vehicular accident at the unlit (not that I want the village awash with lights) badly signed, poorly laid out junction of A247 with the A3 southbound to Guildford. Serious enough to warrant a police car and ambulance - looked like at least 2 cars. Seen quite a lot of bother here. I avoided by coming home through Clandon the other way ie via the Clandon Crossroads and a driver in the opposite direction said there was an accident and the road was "closed".

8. From Resident:

Can I please mention the road by our village church. It is very dangerous trying to cross the road to and from the church - cars speed around the corner from the village towards Clandon crossroads - we have to have people guide us across from a viewpoint from the path on the church side. Church-goers park in the Rectory drive and it is too dangerous to turn right on exiting - it is necessary to turn left and go back on yourself at Clandon crossroads.

9 From Resident:

I. am not sure that I have missed this point but the other thing that also adds to the issues in the village are cyclists. It is not necessarily the cyclists that are a problem (although there is increased volume since the Olympics and annual races through here) but the way that cars and trucks overtake. I have seen several near misses as impatient drivers go to overtake as soon as they enter the village (particularly from the Church side) on a road that is both narrow and has blind bends. Often, to be faced with a truck or car coming the other way (and often not taking into consideration the pedestrians safety should their overtaking antic go horribly wrong).

10 From Resident:

About 15 years ago a man nearly lost his foot in an accident outside Jaynes (half way between the Onslow and the Station) as he crossed the road, the driver must have been speeding.

Later, about 10 or so years ago there was a major incident where a White van going northbound way too fast tried to break in wet weather (probably didn't realise there was the

station and cars turning) and went off the road to the west side (ie nearside) and narrowly missed the bus stop just south of the railway station.

11 From Resident:

You might be interested in these photos taken last year when traffic came to a grinding halt when two HGVs came face to face in the narrow stretch outside Summers. I think the picture says it all.

(Photos attached to document)

12 From Resident:

I hope we are not thinking that a 20 mph speed limit in our village is an unobtainable dream. The excellent .....includes a long list of the many towns and cities which have already made 20 mph as their norm for residential streets like ours. Let 20 be the new 30 for our village as well.

13 From Resident:

I lost my wing mirror recently at the pinch point near Summers as the car coming in the opposite direction in the dark was over the white line.

14 From Resident:

I had a minor accident trying to turn right out of Oak Grange road a month ago. No-one hurt, though damage to both cars, but coming out of that road is a nightmare at certain times of day. Visibility, particularly looking left, over the hump and bend by the railway bridge, is very poor, given the speed at which traffic moves. A 20mph limit would go a long way to preventing such accidents. I know of at least one other who has had an accident coming out of Oak Grange Road, and I'm pretty sure she mentioned another accident as well as hers.

15 From Resident:

I agree that the danger to the largest number of people are the cars heading north from the Summers pinch point. Once they get onto the straight downhill section past the village hall most are doing 40 , many much faster, especially in the morning rush. I will never forget the time a van lost it and careered into the side narrowly missing the bus stop just shy of the station. This is the main gathering area for children in clandon to get their school bus and it makes them sitting ducks. Hence whilst I also support slowing south bound traffic into the 30mph section the main risk on numbers of potential casualties is fast traffic coming downhill towards the rail road crossing and of course near the school further south. I would be very happy if we can achieve 20mph but 30 would be a good start.

16 From Resident;

I have had to stop many times at the narrow part of the A247 or just before it to avoid being hit by lorries, buses and speeding cars. Lots of the lorries and buses mount the pavement to get through and likewise I have had to mount the pavement because of on-coming lorries and buses. The HGV learner lorries are the worst! Especially the double hinged ones. I have had my wing mirror hit once whilst stationary just before the narrow point. I walk along the main road fairly often and I am scared to. The speeding vehicles whizz by. I am sure that I have escaped been hit by lorry/bus wing mirrors several times.

17 From Resident:

I don't know how possible it is to get the speed limit reduced to 20mph but I am fully supportive.

18 From Resident:

Further to your point as to quite where any sign should go I would endorse your view that the bend near Lime Grove needs motorists to slow down. We live at .....The Street. Our entrance

is on the right soon after you come around that bend from the Send direction. A few years ago my daughter was sitting stationary signalling right to turn in, waiting for oncoming traffic, when two motor cyclists came around the bend too fast. One did manage to stop OK, but the other (less experienced one) came off her bike and injured her arm in avoiding her companion and also my daughter's car. I don't believe the incident was ever reported to any authority/insurance company as no damage was done to anyone or anything other than the motorcyclist herself and her bike. But definitely a dangerous bend.

Turning right out of our drive - up which there are three houses - I quite often get the feeling that I have annoyed people by making them slow down sharply after the bend, but they were not in sight when I made the decision to pull out. I would suggest they are travelling too fast for the road.

19 From Resident:

I would suggest the most dangerous part of the of the A247 coming through the village is the narrowing of the road by "Summers", and the main entrance to the station . In the past 3 years there has been numerous accidents at this spot, and I have seen motorcyclist's doing " wheelies" over the bridge .To try and get motorist to adhere to the speed limit, I have put 30mph and speed kills notices in a prominent position on the entrance to the station which can clearly be seen from the A247 , with little success.

20.From Resident:

I live between the station and the Onslow and currently walk my son to Clandon school most days. I have 2 younger boys as well so quite often have a double buggy. I am determined to walk, but do often wonder whether I'm being irresponsible in terms of our safety. Particularly on the narrow pavement by Summers. Last week I was walking and a van almost brushed her leg and the buggy as it drove past. We have often discussed that a priority lane is needed at that point so that only one car can pass at a time at that narrow point and perhaps further traffic slowing/calming measures.

I would also like to draw you attention to the Department for Transport Circular 01/2013, which has been drawn to my attention by Sir Paul Beresford, our local MP. I would outline some of the advice for Local Authorities from the Ministers which I think is appropriate to our request.

“Traffic authorities are asked to keep their speed limits under review with changing circumstances and to consider the introduction of more 20mph limits and zones, over time, in urban areas and built up village streets that are primarily residential to ensure greater safety for pedestrians and cyclists using the criteria in Section 6.”

“Roads should be designed to that mistakes made by road users do not result in death or serious injury. Effective speed management is part of creating a safe road environment which is fit for purpose.” “Achieving local speed limits that better reflect the needs of all road users not just motorised vehicles”. “Ensuring improved quality of life for local communities and a better balance between road safety, accessibility and environmental objectives, especially in rural communities”.

Considerations in setting local speed limits

23. A study of types of crashes, their severity, causes and frequency together with a survey of traffic speeds, should indicate whether an existing speed limit is appropriate for the type of road and mix of use by different groups of road users, (including people walking, cycling or on motorbikes) or whether it needs to be changed. Local residents may also express their concerns or desire for a lower speed limit and these comments should be considered.

24. Is about air quality.

26. Where there is poor compliance with an existing speed limit on a road of stretch of road the reasons for non-compliance should be examined before a solution is sought.

Outside Summers Cottage

**Petition [Item 5]**

<b>Principal petitioner/ organisation</b>	Mr Calum Shaw, 103 confirmed signatures, e- petition
<b>SCC Division / GBC Ward</b>	Guildford SE/Guildford SW/Friary and St. Nicolas
<b>Summary of concerns and requests</b>	<p><b>Improve the safety of the traffic lights on York Road outside Waitrose in Guildford:</b></p> <p>Motorists exiting Waitrose car park turning right up York Road are being confused by seeing red traffic lights at the pedestrian crossing. They stop, then sometimes realise their mistake and drive through late, by which time a green man is displayed. Crossing is used extensively by primary school children. Suggested improvements: 1) add right filter light on opposite side of York Road to Waitrose 2) add a sensor to hold the pedestrian light on green when there are many people crossing</p> <p>(see diagram below for more information )</p>
<b>Response</b>	<p>We thank the petitioners. The following is the response to the two suggestions made:</p> <p>1) Add a right filter light on the opposite side of York Road to Waitrose. <u>Response.</u> We do not think that installing the suggested signal opposite the Waitrose junction will obviously improve road user behaviour. Drivers exiting the Waitrose site already receive a clear signal from the signals located at the store exit. Having left Waitrose, drivers exiting right seem to have doubt about completing their right turn manoeuvre. They are sometimes distracted by trying to view the signals aimed at A246 eastbound drivers, and/or by pedestrians at the signal controlled pedestrian crossing over the A246 eastbound lane, who sometimes do not cross on a 'green man'.</p> <p>2) Add a sensor to hold the pedestrian light on green when there are many people crossing. <u>Response.</u> The pedestrian crossings at the A246 York Road / Waitrose traffic signal junction already features 'on-crossing' sensors, to detect pedestrians using the crossing and adjust the 'green man' time accordingly. All road users, whether they be pedestrians or motorists need to obey traffic signals.</p> <p>County council officers are fully aware of the issues present at this signal junction. In conjunction with Waitrose's team, they have been trialing a series of measures, to try and address the issues, including:</p> <ul style="list-style-type: none"> <li>- Fitting extended hoods to signal heads that drivers seem to be viewing incorrectly, and</li> <li>- Covering signal heads that drivers seem to be viewing incorrectly.</li> </ul>

	<p>Unfortunately, this has not substantially changed road user behaviour. Further possibilities include relocating signal poles / heads and other changes, which county council officers will trial, in conjunction with Waitrose's team, to try to fix the issues. This work is continuing.</p>

UP →

Observation 18th  
May 2016 3pm:  
2 out of 10 traffic  
light cycles result in  
driver error

<b>Principal petitioner/organisation</b>	Mrs Joanna Chwatow, 155 confirmed signatures, paper petition (signed letters)
<b>SCC Division / GBC Ward</b>	Guildford East/Burpham
<b>Summary of concerns and requests</b>	As residents, including the Burpham Community Association, we would like to ask the Local Committee to take action to improve road safety on Burpham Lane: to lower the speed limit to 20mph and to introduce additional traffic calming measures. We are asking the Committee to commission an assessment of the feasibility of a lower speed limit (20mph) via the local highways team. It was suggested by Mr. Duncan Knox, Road Safety Team Manager at Surrey CC, that the highways team could order some pneumatic tube surveys to collect data which could be used for this assessment.
<b>Response</b>	<p>The Committee would like to thank Ms Chwatow for presenting the petition on behalf of the local residents in Burpham.</p> <p>The SCC officers receive many highway requests, such as the Burpham Lane safety improvements scheme. Firstly, an initial investigation is carried out and if deemed to be justified it would be placed on the running list for recommended further investigation. The running list will then be taken to a Task Group to be further discussed. The Task Group is comprised of local members, Surrey County Council Highways officers and Guildford Borough Council officers. The schemes that are approved by the Task Group will then be presented in a formal report and taken forward to a Local Committee Meeting to secure funding. Only the schemes that are approved and funded by the Local Committee will be progressed.</p> <p>The SCC Highways officers have investigated the above and placed Ms Chwatow's request on the running list to be discussed in the autumn Task Group meeting.</p>
